

Principle

The automatic numbering system created by M.G.I. lets you produce tickets very quickly without the disadvantage of the typo mode (independent numbering devices that require constant supervision). The combinations are as numerous as there are numbers. The basic principle is output by sheets and a number of labels per exposure. This system may strike you as complicated to use. Rest assured, by observing the following examples, you will master it easily. The response to the various numberings encountered.

- ☐ **Auto No** Check this box to activate numbering starting with the number typed in the entry screen. If no incremental number is typed, the default increment is 1.

The screenshot shows a software interface with various settings. The 'Auto No' checkbox is checked and circled in orange. Other visible settings include:

- Text input: 100
- Alignment: Left (selected)
- Font: Arial
- Font size: 8
- Normal exposure: Normal
- Line: 9
- Pos X: 0.51
- Chr Sp: 0
- Line Sp: 0.200
- Buttons: Ok, Cancel

Ex : : Type 100 and check "Count" 100 (starting number) => 100, 101, 102, 103,

For a special increment value setting :

All you need to do is type the starting number + (if the numbering is positive) or - (if the numbering is negative) followed by the increment value.

Ex : 10+2 ==> 12, 14, 16, 18, ...

Ex : 100-5 ==> 95, 90, 85, 80, ...

It is possible to type text before or after the numbering :

Ex : Check "Count" box, type "Lottery Number 1000+10"

Display ==> Lottery Number 1010 ; Lottery Number 1020; etc.

The numbering is managed like a line, i.e., the fonts, font sizes, margins, line spacing, colors and alignment can be changed. It can be applied to all kinds of documents.
